1.Created NegativeAgeException extending Exception class.

2.Super method is used to pass the value to the constructor of Exception class.

3.Created class MyException.

4.One static method validate is created to check the age and throws the exception.

5.Main method is defined in the class and Try and Catch block is used to handle the exception.

6.Lastly One message is printed to confirm the end of the program.

```
C:\Users\IBM_ADMIN\javaprg>java MyException
Picked up _JAVA_OPTIONS: -Djava.net.preferIPv4Stack=true
valid
Exception occuredNegativeAgeException: not valid
